PRODUCT WORKBOOK 2016 – 2017

PYRANHA MOULDINGS ABOUT US

Pyranha have been manufacturing kayaks in the North West of England since 1971. Over the last 44 years we have supported local paddlers and world class expeditions, developed some of the most innovative products on the market, won numerous industry awards and in the process become Europe's leading specialist manufacturer of canoes and kayaks. Every boat is designed by our international team and built in Great Britain.

Owned and run by kayakers, we are committed to being on the leading edge of kayak design

across all our brands. As paddling enthusiasts, we also cherish the waters where we enjoy our sport and we strive to reduce our impact on the natural environment. At Pyranha we make constant improvements to our whole production process to support these goals. Developing the most technologically advanced materials, using industry leading processing methods and implementing detailed quality control systems means we can produce truly world class kayaks and help reduce our impact on the environment at the same time.

Lighter

Stiffer

Stronger

CoreLite X is about 3–6kgs lighter than standard CoreLite and exceptionally stiffer for increased performance, all whilst adding durability too!

MADE IN GREAT BRITAIN

Technology advances at an incredible pace; we are constantly researching, innovating and trialling progressive approaches to the design of canoes and kayaks. 90% of these ideas never make it into production, either due to our own limitations or those of the machinery and processes available at that time, but we are enthusiasts making boats for other enthusiasts, so we carry on.

This approach to the manufacture of canoes and kayaks has seen us constantly pushing its boundaries over the past 25+ years, all from our headquarters and factory in Cheshire, England.

In 2015, we revisited an idea we first trialled in 1991, but at the time were unable to control well enough for it to be viable for production; it's amazing what 25 years of machinery advancements, experience and thought can do though, and we're pleased to say that this time we successfully produced the advanced material that we now call, 'CoreLite X'.

CoreLite X is a huge step forward in the construction of sandwich layer polyethylene canoes and kayaks, produced with a high degree of precision, and finely tuned to give the following benefits:

Key Benefits of CoreLite X:

- **Lighter:** much easier to carry & paddle than standard PE canoes, particularly for those with minimal experience of canoe handling.
- **Significantly increased hull stiffness,** bringing it closer than ever to composite performance.
- **Greater durability,** meaning you can forget your worries and lose yourself in the adventure.

"To lift a CoreLite X boat is as if you've spent months getting fit, and to paddle one is as though you've had an upgrade to a Kevlar/Carbon Lightweight construction too!"

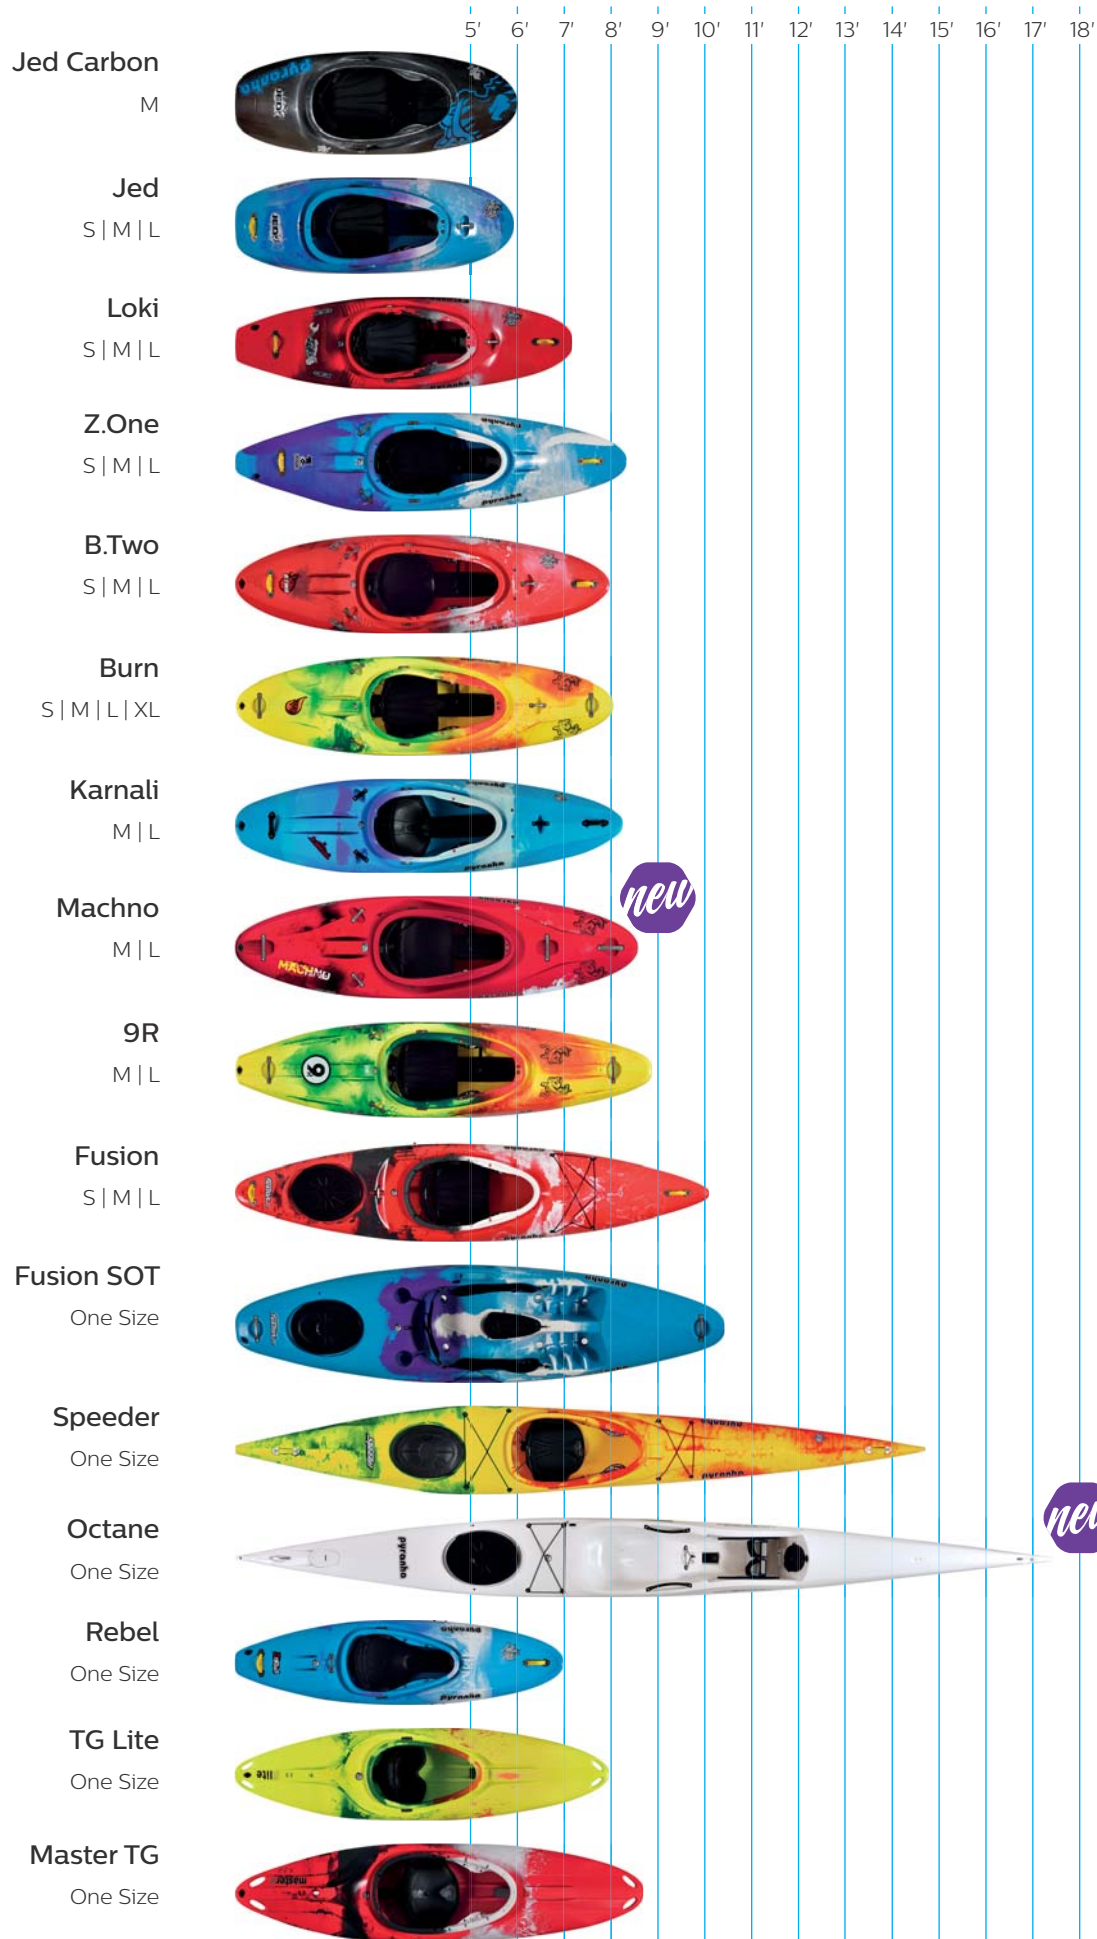

– **Graham Mackereth, Founder & MD of Venture Canoes / Pyranha Mouldings Ltd.**

Due to the nature of polyethylene roto-moulding some slight variations may occur. Please use this chart as a general guide only. E&OE.

Optimal load weight is the weight of the paddler when fully equipped, plus the weight of any gear stored in the kayak. Please note this is provided as a guide only and will depend on your skill level, as well as the conditions which you are paddling. We strongly recommend demoing kayaks before purchase.

Red = Pre-production specs.

= New product.

PRODUCTION

Metalocene Polymer Technology And Production

Piranha is at the forefront of polymer technology. We use cutting edge metalocene polymer to balance the competing demands placed on a kayak in the whitewater environment. Our state of the art polymers blend impact resistance with stiffness. This allows our hulls to have both high shock absorbency to resist impact and wear, and high stiffness for performance and paddler safety.

In 1983, Piranha developed the industry's first computer controlled moulding process. We've been refining this system ever since, and have been producing variable thickness kayak shells for 28 years. Our computerized ovens allow us to manipulate the moulding process to selectively reinforce high wear areas with more plastic. This makes it possible for us to optimise performance, weight, durability and safety in our designs.

Our custom built, energy efficient ovens are the most advanced in the industry allowing us to truly get the best performance out of the metalocene polymer we use.

Quality

Keeping high standards of quality is a top priority at Piranha, every effort is made to ensure each boat that leaves the factory is tough enough to be used in the conditions it is designed for. Since 1995 every polymer development and new colour has been independently tested for impact and toughness. Every kayak is drop tested to check for brittleness and every batch is ultrasonically tested for thickness.

Environmental

We have been industry leaders in energy efficiency for many years and our new factory has given a 25% reduction in gas usage due to innovative heat retention systems. Our energy utilization per kayak is the lowest in the industry and we have been recycling our waste polymer since the 1990's. Piranha are committed to reducing our impact on the environment while producing the world's premier canoes and kayaks.

Jaffa

Every kayak has features that make it perform in a certain way and make it more or less suitable for particular environments. Here we explain how each feature is likely to affect the boat.

DESIGN FEATURES

Planing or Semi Planing Hull

A flatter hull will allow the boat to surf or spin on waves and give it manoeuvrability around the river.

Displacement or Semi Disp. Hull

More rounded hulls give softer landings on drops, can be more stable in turbulent water and faster.

Progressive Rocker

Smooth curve from bow to stern increases manoeuvrability helps soften landings.

Kick Rocker

Bow kick rocker: Helps to drive the boat high over water and rocks.
Kick Stern Rocker: Helps boof from the lip of drops.

High Volume

In the stern: Keeps the boat high over features and helps with resurfacing.
In the bow: Helps punch through features and keeps the bow loose and manoeuvrable.

Low Volume

In the stern: Improves surfing performance and play performance.
In the bow: Allows for easier initiation of vertical moves by engaging deck edge

Edges – Full Length or Stern

Allow paddler to engage edges either on hull or deck to give carving performance

Deck Ridge

Helps the bow and stern to shed water and give directional control in features.

SAFETY FEATURES

Aluminium Grab Handles

Strong durable aluminium grab handles are used in the Machno, 9R, Burn III and Fusion SOT.

Captive Inserts

For all security bars and grab handles, fewer holes through the shell mean a drier boat.

Hull Stiffener

Links front and rear pillars to the seat to form a safety cage around the paddler and help prevent collapse in the event of a pin.

Connect Grab Handles

All our grab handles are made using climbing grade webbing, as we only want webbing that you could trust in a climbing harness in our kayaks.

Bow 'Step Out' Pillar

Provides highest level of structural support to the deck, essential in high pressure situations. Can be used to step out of the kayak in the event of a pin and also makes an excellent carry support.

Full Plate Footrest

Pod system with foam gives connection for drive, pre-bent bars aid shock-absorption.

Connect Security Points

Made by UK climbing specialist DMM who manufacture our security bars with the same process that has held them at the forefront of the climbing market for years.

Mini Cell Foam Pillars

This black closed cell foam gives high structural integrity to the deck to help prevent it collapsing under pressure.

Foam Foot Block

Easily shaped for perfect fit in play boats.

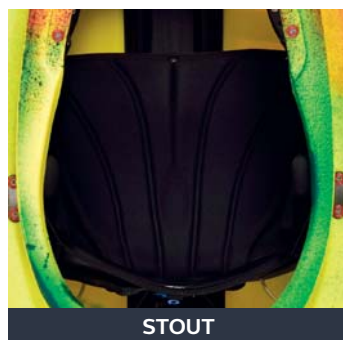

Twist Lock Footrest

Fully adjustable footrest, twist lever 90° to adjust pedal, twist back to lock.

OUTFITTING

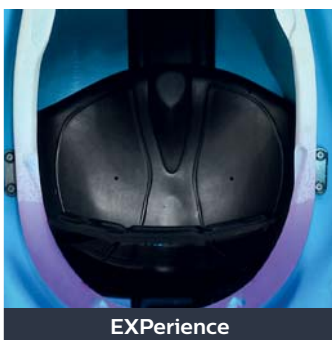

The outfitting in your kayak is vital to your comfort, safety and overall performance on the water. Our outfitting systems have been developed over the last 40 years and incorporate the adjustability and security you demand from a whitewater kayak. Our rigid, highly engineered outfitting components help to create a safety cage around the paddler for maximum security, and our easy to adjust systems allow for customisation of your kayak for maximum performance.

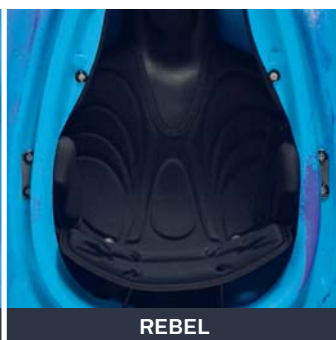

STOUT

CONNECT RIVER

EXPerience

REBEL

STOUT

Jed, Loki, Z.One, Burn, Machno, 9R, Fusion

Stout Seat

Strong, solid seat with front to back and height adjustment, ergonomically shaped with padded liner.

Adjustable Hip Pads

Adjustable hip pads allow you to add and remove foam shims to give a perfect fit and connection.

Adjustable Ratchet Backrest

The backrest can be moved forward and backwards and its height can also be altered.

Adjustable Thigh Grips

5 settings with solid connection to boat for comfort and control.

Gear Strap

Stow your throw line or drinks bottle close to hand.

Adjustable Backrest

Features adjustable webbing for a personal fit.

Adjustable Thigh Grips

Afon Machno, 53.064°, -3.779°; the tributary that powers the infamous Fairy Glen, and just over an hour from Pyranha HQ, this is where initial testing for the Machno took place.

The Pyranha Machno has been refined through the feedback of Team Pyranha members worldwide to feature a formidable bow rocker profile that keeps you on top of things, and a wide planing hull with soft chines that's both stable and predictable.

When you're in the Machno, you'll almost feel as though time has been slowed down as you glide into the rapids, waiting for the perfect moment to

plant those key paddle strokes and nail that boof, flair or kickflip.

KEY FEATURES

- Wide planing hull, confidence inspiring and stable.
- Soft rails won't trip you up, but are still there to enable controlled carving turns.
- Extreme bow rocker profile for a dry ride.
- Peaked deck sheds water quickly.
- Stern release edge retains speed efficiently.
- Tailored volume distribution with wide bow for a comfortable, controlled paddler stance.
- Open stern handle recess allows a more comfortable grip when lowering the kayak.

The Machno is the perfect blend of confidence inspiring performance without being boring to paddle; this will be my everyday boat of choice for many years to come.

Bren Orton, Team Pyranha.

After discovering how much fun going fast in a kayak on a river can be with the recent release of the 9R, and blasting across open water in our P&H range of sea kayaks with the P&H Kayak Sail System, we started to wonder just how fast we could possibly go in a kayak – that's when we started looking at making our own Surf Ski.

Enter the Pyranha Octane; at a length of 17' 6" and a super narrow beam of 20.8", with all the fittings to take an optional performance kayak sailing rig moulded in, the Octane will be a whole heap of fun for those looking to keep up their fitness in the off-season, explore the coastal waves or break into the competitive racing scene, it's so fast it will almost quite literally knock your socks off!

KEY FEATURES

- A chine that runs from under the paddler to the stern for a fine balance of carving ability, stability and surfing speed
- Deep bucket for ultimate control and ergonomic paddle entry cut aways.
- Minimal 23kg estimated weight (dependant on spec), offering performance comparable to a composite ski, with the added durability of a plastic construction for rough beach landings.

Wow, the Octane is fast and very responsive! It seems to reward you with speed every time you do something to make your forward paddling better, great for fitness and technique. I can't wait to get it out in offshore surf!

Gethin Roberts, Sea Kayaking Wales.

| M | 183cm | 65.5cm | 210l | 9kg | 55–90kg |

The most progressive freestyle design on the market, now constructed in the most advanced composite materials available. Featuring a 40% weight reduction over the plastic version, a foam core hull for superior stiffness.

Reduced weight will make both initiating and finishing tricks easier, give you more air time and produce less fatigue during long combos and rides.

Each Carbon Jed is made in our specialised factory where we have been making composite

boats for over 40 years, meaning your kayak will be constructed by some of the most experienced craftsmen in the industry.

KEY FEATURES

- Planing Hull.
- Full Progressive Rocker.
- Full Length Rails.

The Carbon Jed takes every positive point of the plastic version and amplifies it; it is faster, lighter and stiffer. The Carbon Jed doesn't just open the door to a new realm of freestyle potential, it kicks it down.

The third generation Burn is the latest in Pyranha's long line of cutting edge river runners. Paddlers have come to rely on the Burn's combination of a playful hull, precise edge and forgiving deck profile for everything from intro classes to Class V creeks. The new Burn refines these features further, giving you more speed and drive, precise tracking in turbulent water and effortless boofs. The Burn's combination of stability and precision make it a proven performer – whether you are a beginner running Class II or an expert firing up big drops.

KEY FEATURES

- Increased length for extra speed, smoother tracking and greater control.
- Sharper centre and forward edges for greater precision in river running and playing.
- Re-profiled stern for speed with more edge where you need it, less where you don't.
- Tweaked rocker profile so the boat rides high and gives you the all-important boof.
- Subtle volume distribution for confidence inspiring rides for intermediate paddlers and those making steeper descents.
- Re-profiled cockpit reduces deck implosion and eases carrying.

The Burn III carves around the river like a sports car and snaps in and out of eddies dynamically. The increased bow rocker makes boofing easier than ever and the redesigned stern make it more forgiving than ever! I love it!

9R

USAGE

**Creek
River Running**

OUTFITTING

Stout

COLOURS

| SIZE | LENGTH | WIDTH | VOLUME | WEIGHT | OPTIMAL LOAD WEIGHT |
|------|--------|-------|--------|--------|---------------------|
| 9R | 271cm | 64cm | 295l | 19.7kg | 60–95kg |
| 9R L | 272cm | 68cm | 340l | 22.7kg | 75–125kg |

The 9R can take you anywhere, and fast! From races to waterfalls and expeditions, the 9R holds its line. Narrow entry and asymmetric plan for speed, subtle edge for precision control and high bow, tailored rocker and volume distribution keep you on top and in control.

Control strokes around the bow to middle of the boat suits the 9R best, making sure each stroke gives you power, speed and manoeuvrability to help you catch more eddies, make ferry glides easy and punch through more holes.

KEY FEATURES

- Asymmetric Swede form and narrow width for speed.
- High bow to lift over obstacles, punch holes and resurface quickly.
- Continuous rocker for speed.
- Rounded edge bow for forgiveness helps keep you on line.
- Flatter bow profile to direct water under hull for quick bursts to hull speed.
- Slight edge starting center running to stern for control.
- Peaked bow deck and stern for shedding water.
- Clean release off stern with edge.
- Low profile front cockpit and recessed rear cockpit to prevent water loading.

The 9R is my dream boat, fast and amazingly fun to paddle. I don't want to use anything else and I'm beyond stoked to own the best boat in the market right now! Thanks Pyranha, crushed it!!!

| M | 312cm | 66cm | 308l | 20.8kg | 55–110kg |
| L | 312cm | 69cm | 366l | 22kg | 80–130kg |

The Fusion is the perfect crossover kayak; stable, fast and easy to paddle. The Fusion gives you the freedom to paddle on quiet lakes or bounce down your favorite wild river. A whitewater-capable hull gets you down the river with confidence and the drop-down skeg helps the Fusion track straight for flatwater exploring.

Easy to use, store and transport, the Fusion features a large hatch and removable deck pod for storing all your gear on weekend adventures.

River Tour Outfitting has Flip-Top Backrest, Padded Seat, Thigh Grips and Twist Lock Footrest.

Fit 4 Outfitting has Fit 4 seat and backrest and thigh grips. [See Venture Kayaks Outfitting Page for details]

Stout and EXPerience outfitting is detailed on the Pyranha outfitting page.

KEY FEATURES

- Planing Hull.
- Progressive Rocker.
- High Volume.
- Skeg.

The boat built for your next adventure. You can easily fit all the gear and beer you need for a fourteen day trip and still be able to move it around. This boat is made for anything from your local rivers and lakes and even The Grand Canyon of the Colorado.

Craig Kleckner, Trip leader of Demshitz does the Grand.

- Progressive rocker.
- Stable, nimble hull for running rivers with ease.
- Straight tracking speed for cruising flat water.
- Moulded in side carry handles.
- Aluminium grab handles.
- Storage for overnight trips.
- Cup holders.
- Optional scupper plugs.

The Fusion SOT is one of the most versatile boats that I've ever paddled, from whitewater to slow moving waters, and the dry hatch makes for some awesome overnight experiences. You don't even have to own a skirt.

Damien Dill (BiggD).

| SIZE | LENGTH | WIDTH | VOLUME | WEIGHT | OPTIMAL LOAD WEIGHT |
|------|--------|-------|--------|--------|---------------------|
| | 450cm | 60cm | 366l | 22kg | 55–125kg |

Race-inspired but friendly to paddle, the Speeder is perfect for fitness fans or anybody who likes to get moving. Capable on flatwater or rapids, this fast crossover kayak will handle anything you throw at it – from down river racing to light coastal tours. A favourite among team paddlers and adventure racers – there's nothing on the water like the Speeder.

KEY FEATURES

- Displacement hull.
- Long waterline length for speed.
- WW racing style for down river manoeuvrability
- Rear hatch for storage.

This is the boat you can paddle and get exercise with, even when the rivers aren't running – We use them in the ocean, in the sound/bays, on our local big river cruising and for fitness/exercise high speed runs to get some aerobic workout.

|------|--------|-------|--------|---------|---------------------|
| | 214cm | 56cm | 155l | 12.4kgs | 25–50kg |

Watch out!! This boat will make you wish you were young again. A versatile river runner for kids that gives top end WW performance in a friendly package that is easy to get to grips with. The Rebel is designed to be the most responsive boat out there, allowing young paddlers to unlock their full potential.

KEY FEATURES

- Planing hull.
- Progressive rocker.
- Forgiving soft edges.

The raised bow rocker, forgiving rails and fairly flat stern rocker make it a good boat to learn to surf waves in and for getting to grips with things like eddy turns.
