

Flexible packaging solutions.

Speed and Flexibility combined.

Elastic Staple™ Fastening System

R6

powered by VNS

The Marisan R6 is our optimal mid-range semi-automated solution for products that require a one staple attachment or for the staples to be attached closer than 80mm. This machine is fully adaptable to all retail markets and popular with the following industries: cosmetics, beauty products, kitchen utensils, cutlery, hand tools, knives, bike parts and microfibre/home textile products.

The R6 has been specially designed for manufacturers with all level of volume and small or large product ranges. The R6 can quickly and seamlessly switch from one product to another and achieve faster packaging speeds than the R4 machine due to the automated actuation (customers chose between either a foot trigger or two-hand actuation).

The R6 allows customers to take advantage of the eco-friendly Elastic Staple™ Fastening System and significantly faster packaging times without the large investment often associated with such benefits.

foot pedal activator and jig

R6 - Speed and flexibility combined.

The Marisan VNS packaging solution is the ideal solution for companies looking to utilize semi-automated packaging and a perfect replacement for blister packing and cable ties or twist ties. The R6 offers the following key advantages:

- **Easy to set-up and use with Marisan's unique design – a true plug & play solution.**
- **Significantly faster than hand held solutions and much easier and less strenuous for workers to operate.**
- **More cost effective and environmentally friendly than blister solutions and allows the end customer to touch and feel the product.**
- **Offers significantly increased packaging speeds allowing you to deliver to your customers faster and reduce the number of staff and overhead - depending on operator, product speeds between 6-18 per minute.**
- **Helps reduce expensive packaging and packaging waste therefore reducing recycling fees.**
- **Eliminates the cost of pre-punching header cards. The Elastic Staple™ visually enhances the display of your products.**
- **Products are easy to remove from packaging and the staples do not damage the products.**
- **Staples are available in a whole range of lengths, transparent and black version and are child-friendly.**

With the Variable Needle System (VNS) and the wide range of staple lengths available, the R6 can package all your retail products and a double shot setting is available for attaching heavier products. Variable jigs and moulds can be used to provide exact product positioning on your packaging for every product and there is no longer a need to purchase packaging or cards with pre-punched holes as the needles make the holes.

Marisan offer a free of charge sampling service, so please feel free to send your products to the nearest Marisan office and let us transform your packaging. All products will be returned, packed with the VNS Elastic Staple and a video to show how these were packed. We can also do drop testing to ensure the products are attached properly to avoid any issues during transportation and storage. Alternatively, Marisan are always happy to visit your company to introduce our packaging solutions and advise you on the optimal solution for your products. Marisan also offer all forms of packaging materials at competitive rates - please contact us for a quote or samples.

R8 duo

The **PERFECT** packaging solution for floor mats.

The new Marisan R8 duo is the optimal solution for packaging all door, bathroom and floor mats!

Let your product take over the spotlight and be free from customer-unfriendly metal staples and the inefficiency of a hanger return system!

By increasing the attractiveness of your product at the point-of-sale, you increase desirability and therefore sales. With this innovative solution from MARISAN, you can:

- **Present a product that is packaged ready to go.**
- **Improve customer safety by eliminating sharp metal staples.**
- **Facilitate a harmonious presentation of your product.**

The floor mats are almost „magically“ attached to the plastic hanger and header card using Elastic Staple™ plastic fasteners, which are barely visible. These fasteners can be easily severed with a knife thus allowing a simple removal of the product from the packaging. Consequently, the chances of product damage are practically eliminated.

Technical Data and Implementation of the Solution

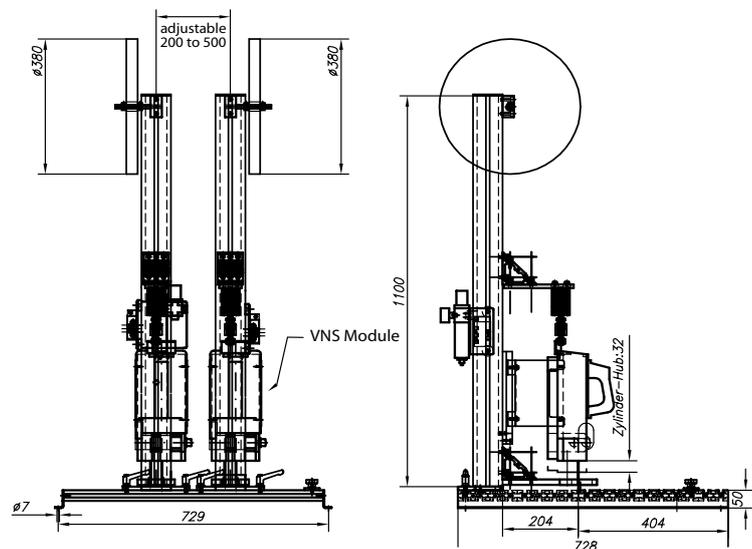

The MARISAN R8 duo ES possesses two Variable Needle System - VNS modules from Avery Dennison™ by which the Elastic Staples™ are applied.

Variable stoppers and jigs provide for exact positioning of your products and allow for a rapid and constant packaging speed. This in return will allow you a faster turnaround time to your clients. Furthermore, this automated process greatly reduces the cost intensive manual work associated with traditional metal staple devices.

- Space efficient ready-to-use table-top machine
- Time saving and operator-friendly automatic actuation
- Distance between fastening modules is continuously adjustable from 200mm to 500mm
- Various fastener lengths and colors available
- Optional labelling of the packaging through integrated print and apply applicator
