Sonnette
for the exacting organist...

noorlanderorgels.com

Why a Noorlander organ?

An organ should arouse your senses. The sound is very important but so is the organ console itself. Noorlander Organs leads in this field. Our organs have a very realistic (pipe) organ sound, thanks to very advanced Hauptwerk technology.

For optimal use of Hauptwerk we have developed special hardware and software.

Our organs have a fantastic sound reproduction system aided by a Noorlander Organ Manager. This software automatically regulates the power, audio and midi. The finishing touches can be done to match your other furniture. All operating controls are carefully disguised in the organ console.

We can offer you personalized advice and a premium guarantee. Do you need help? Through internet or telephone, we can offer you the help you need.

▲ Standard with 3 manuals

▲ Optional speakers in the top

▼ Ergonomic design

About Hauptwerk

Technology

Hauptwerk is a technology which we use for the sound reproduction. This computer programme makes it possible to play virtual pipe organs. The original pipe organs have been recorded pipe by pipe. And not only that, even the sounds of the tracker action and room acoustics have been included. All of these sounds combine to make what we call a *sample set*.

Organs

Many famous and important organs have been recorded for Hauptwerk and many more are to follow. The reality of the sound can be compared to that of a CD. Hauptwerk technology not only appeals to the imagination, but also brings your favourite pipe organ into your living-room.

The possibilities with Hauptwerk are almost endless.

Sonnette III

For the exacting organist.
A modern design and ultimate functionality go hand in hand.

Simple lines and a tranquil design make this organ suitable for every living space. The slanted touch screens immediately show the chosen registration.

Behind the music rack is a keyboard and a mouse. The design allows for speakers pointing upwards as well as forwards at ear level.

Always wanted to play famous pipe organs?
It is now possible, every day!

With the Noorlander Organ Manager it is possible to select the directness of the sound. For the enthusiastic organist, this organ offers limitless possibilities while still being easy to manage.

This organ is unique for a variety of reasons:

- High end multiple channel audio system
- Ultimate listening experience due to perfectly placed speakers
- Service through internet and telephone
- PC with SSD and 1 TB memory
- 11 free pre-installed sample sets
- Headphone connection
- 2 ergonomically placed 17" touch screens
- Adjustable bench height
- 2 wooden swell pedals
- Your choice of finish and colour
- Dividable console
