NOBLE LINE

Dedication to details

The MBL Noble Line components have been methodically coordinated with each other and have a captivating look from all angles thanks to the meticulous 360-degree design. We have created a masterful blend of edges and gentle curves. The contrast of glossy and matte surfaces underscores the discerning design of the MBL Noble Line.

- Completely Made in Germany – production of all mechanical parts in MBL's own factory using only high-quality materials
- Various digital inputs up to 192 kHz and DSD
- MBL SmartLink allows communication between MBL electronics as well as with external automation control systems
- MBL LASA 2.0 – advanced technology with fully load independent frequency response and frequency independent distortion characteristics
- CD slot drive with optimized air turbulence and mechanical vibration control
- Psychoacoustic optimized digital and analog filters
- Unity gain affords acoustic transparency during high dynamics and resolution with vanishing levels of distortion
- Hardware and Software featured self-powered USB input, optically isolated
- iPhone/iPod/iPad as input source, jitter free up to 24 bits and 192 kHz
- Toroidal transformer with protective MU-metal shield
- Green standby with less than 1 VA

The New Noble Line – Harmonious Sound and Design...

MBL products have been distinguished the world over for 35 years; we ceaselessly strive to design and manufacture high-end audio equipment that features heirloom quality as a source of pleasure generation after generation. Built with passionate dedication to the art of perfect sound and a perpetual drive for innovation.

MBL's raison d'être is to constantly "push the envelope" of the technical, the sonic, and the aesthetic. We have gone back to the drawing board and designed an entirely new Noble Line. The outcome: new standards not only in sound but also in design and operation.

The sharp, minimalist chassis design is striking with its sleek, timeless lines. The finishes of the casing and metalwork accents are all variable. This potential to individualize allows the new Noble Line to complement virtually any home environment.

It is now radically easy to operate the new Noble Line. Rest assured, this ease in no way limits the user's technical options. Thanks to the new MBL SmartLink Technology, all Noble Line devices can be operated centrally via a handful of keys on the remote control, or in-sync at the system itself.

The new 5" colour TFT display offers various languages and character sets. Rather than confrontation with a foreign language, you are easily guided through the menu in the language of your choice. This feature affords a seamless integration between user and machine, allowing you more time to relax into unparalleled MBL listening experiences.

To create memorable, emotional musical experiences with lasting value for decades to come is our promise to you. We are proud that the new Noble Line delivers on that promise.

Available midyear 2014

Aluminium, Aurum, Palladium

Individual variety

No matter whether you opt for an MBL music system in black or white, design accents in matte aluminium, polished gold, or the warm silver hue of a palladium alloy, you can custom tailor the design so that your new system will perfectly blend with your personal surroundings.
