### Conversion from PP to PP GF Plastic Cylinders:

Hygromatik changed from the older PP to a more stable plastic compound PP-GF (glass fibre) in 2018.

The new cylinders offer: greater stability & fitting accuracy of components, reduced effects of aging & superior thermal endurance properties.

Older cylinders are cream coloured and semi-transparent.  
The new cylinder is yellowish-white and opaque.

When fitting top and lower sections together, it is NOT possible to mix OLD & NEW cylinder sections together.

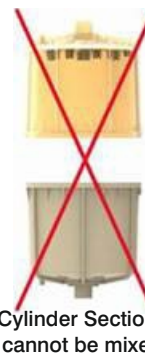

The new type cylinders have condensate return-flow spigots closed but it is possible to drill these out with either a 6mm or 8mm dia. wood drill bit.

Old PP Cylinder

New PP GF Cylinder

Cylinder Sections cannot be mixed
