Conversion from PP to PP GF Plastic Cylinders:

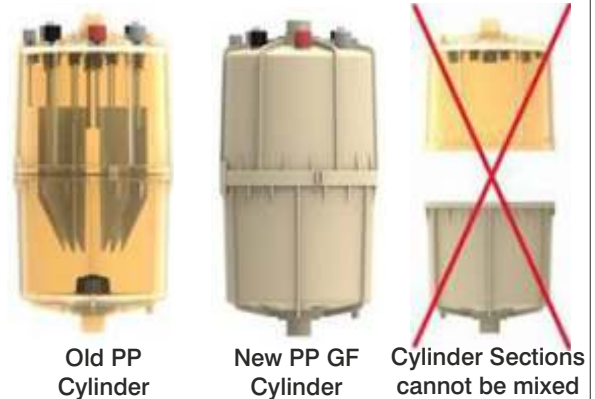

Hygromatik GmbH have now changed from the older PP to a more stable plastic compound PP-GF (glass fibre) which happened in early 2018. The new cylinders offer: greater stability & fitting accuracy of components, reduced effects of aging & superior thermal endurance properties.

Older cylinders are cream coloured and semi-transparent. The new cylinder is yellowish-white and opaque.

When fitting top and lower sections together, it is NOT possible to mix OLD & NEW cylinder sections together.

The new type cylinders have condensate return-flow spigots closed but it is possible to drill these out with either a 6mm or 8mm dia. wood drill bit.

Advisory instructions are available on request.
