

HygroMatik Generators - SuperFlush (Cylinder Rinsing System)

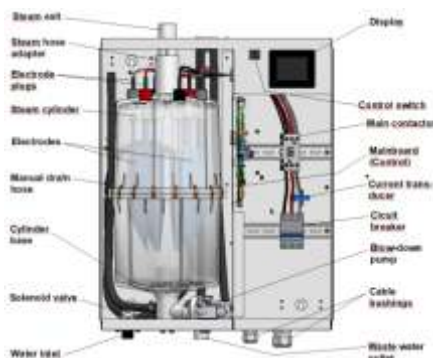

Innovative cylinder rinsing system, can considerably extend cylinder operational time before need for removal and cleaning.
Whilst draining, a pressurised water jet makes scale laying at the cylinder base, swirl therefore creating optimal conditions for the removal of limescale and other residues.

SuperFlush Parts & Functions:

1. Double solenoid valve connected to water inlet & SuperFlush nozzle.
2. Nozzle
3. Additional turbulence within cylinder increases amount of scale drained.
4. Heavy duty blow-down pump drains scale deposits.
5. Steam Cylinder, splits in the middle. Simply open, clean & re-use.

Option available with cyclic mode operation. Rinse cycle more effective thanks to pulsing water jet.
