

## SageWash Sanitiser System - for Wet Area Cleaning & Disinfection

Code	Description	Price
SWS-01	Sagewash Trigger Assembly	275.00
FISHC4	HTH STICK Chlorine Capsules - 4.5kg Pail <i>Hazardous Delivery Charge applies to this chemical - please ask for a quote</i>	97.60

**The Sagewash Sanitiser System** is a patented system which offers a disinfection system using a mains water supply and chlorine tablet housed in the water stream.

**The Sagewash System** will effectively clean, disinfect and eliminate odours while blasting away dirt with the water jet.

The hydro-injection venturi system produces a solution of hypochlorous acid that is up to 120 times more effective than some liquid bleaches.

**No solution mixing** is required as the trigger assembly automatically controls the dissolving process of the chlorine tablets and creates the optimum disinfectant solution.

**No harmful chemical residues:** The active disinfectant provided by **Sagewash System** disinfects, deodorises, performs its functions before it ceases to contain oxidising properties. It is then reduced to a chloride and loses all its disinfectant qualities. Chlorides are inert and naturally occurring and environmentally friendly.

**Odour control:** With the Sagewash System there are no obnoxious, unpleasant odours. Most odours are ammonia/nitrogen based but with the Duration Tablets' 65% available chlorine, they provide enough chlorine to "burn through" ammonia. The low yield weaker diluted sodium hypochlorite solution (e.g. 5.25% Av.Cl<sub>2</sub>) is insufficient to "burn through". Instead this low-yield chlorine forms a bond with nitrogen and creates chloramines. Chloramines produce the obnoxious and pungent odours many people associate with "chlorine disinfection".
