

## Chronic Wound Care Clinical Paper References

*Note: It was understood that these studies were carried out when the BLOODCARE powder was supplied under the brand name Traumacel Powder re papers 1. & 2. and Traumastem Powder re paper 3.*

*The Key Outcome summaries are Anser Medical Ltd's interpretation of the following papers main conclusions.*

1. Can Traumacel be used in the treatment of chronic wounds?  
D. Hofman, J. Wilson, S Poore, Prof G. Cherry, Mr T.Ryan  
Wound Healing Institute, The Churchill Hospital, Oxford.  
UK. 2000.

*Key Outcome: Provide significant pain relief and promote healing even with the most recalcitrant ulcers appears to be a feature of Traumacel whilst being safely absorbed.*

2. Effect of Traumacel P on the growth of human dermal fibroblasts in vitro.  
Dr M.A.Hughes, Y.Yand & Prof G.W.Cherry  
Wound Healing Institute, The Churchill Hospital, Oxford.  
UK. 2002

*Key Outcome: The stimulation of fibroblast proliferation may be one of the ways Traumacel P aids the healing of ulcers observed in the clinic.*

3. Sharing the burden: The complex practice of wound care in the community.  
Helen Hollinworth, Senior Teaching Practitioner,  
Suffolk College, Ipswich  
UK. 2003

*Key Outcome: Whilst antibiotics had no effect in this case example, BLOODCARE addressed the problem of dressing adherence to leg ulceration at the same time promoting pain relief and healing.*
