Why Choose Windows of Distinction?

- Established 1994
- Family owned and run
- Personal service
- No high pressure sales
- Employed installers - no sub contractors
- From one window through to large hotel conversions - we have undertaken them all.

Fully transferable 10 year insurance backed guarantee - including handles, locks, hinges etc.

FENSA registered installers since the scheme inception.

****Which? Trusted Traders****

GGFi insurance backed guarantee members

Our aim is to provide service and backup far in excess of the industry norm, whilst supplying quality products at competitive prices.

We offer a price match guarantee - for the same quality products and service we cannot be beaten on price.

Distinction Energy Windows

Glass/Glazing

Energy Efficiency

Environment?

Windows can account for up to 30% of the total heat loss from a house, therefore it is important to maximise efficiency of your new windows, helping to reduce heating costs and harmful CO² emissions.

Today, windows are energy rated from A-G, with A being the most efficient.

They are measured in 3 ways - Solar heat gain, Thermal heat losses and Air losses.

Solar Heat Gain can be maximised by using a slimmer window frame giving more glass area.

Thermal losses can be reduced by using a high insulating glass unit.

Air losses can be reduced by using a special 'fused' gasket system that is part of the UPVC so cannot shrink back and is welded to create a continual seal around openings.

By using our slimline frame, high insulating glass units incorporating PLANITHERM insulation glass with argon gas and 'warm edge' spacer, and the fused gasket system, Distinctions windows achieve an 'A' rating.

For the ultimate insulation, we now offer 36mm triple glazing.

Quality, Stylish Windows

Whether you choose our stylish fully sculpted system with the traditional look of timber joinery or the classic chamfered style, you can be assured of innovative design.

Fully Sculpted

Chamfered

“ All of our windows are fully made to measure, let your imagination run riot! ”

The gaskets are fused to the UPVC which stops them shrinking over time. The seals remain inline with the UPVC to enhance the appearance - no thick black lines round your windows.

Style & Security

The Windows of Distinction collection has been designed to protect you and your home as effectively as possible.

The glazing beads on all windows and doors are internal beads rather than external - which means your glass is fitted from inside your house and cannot be removed from outside.

Our casement windows combine high security stainless steel friction stays with a multi-point, multi-directional shoot bolt locking system giving up to eight locking points per opening - all operated by one heavy duty locking handle.

Our range of positive lock handles lock the window automatically on closing, and is released by a push button that has additional Keylock for added security*

*Except escape windows

Bow & Bay Windows

Bay windows can be designed to replicate almost any shape or size. If you have a standard window and fancy something different, how about one of our bay windows with canopy and base to create a real feature?

Tilt and Turn Windows

Very popular in Europe, these windows have a two position locking system tilt in at the top for ventilation, then open in fully just like a door, making them ideal for emergency exits or easy clean applications.

Vertical Sliding Sash Windows

Designed to replicate traditional timber sash windows, not only do they slide up and down but the sashes also tilt inwards for easy cleaning.

Traditional appearance with up to date technology, the only real noticeable difference from the original windows will be the increased comfort and warmth in your home.

Patio, French & Bi-Folding Doors

Bring the outdoors in with our range of stylish French and patio doors. Opening in or out, our French doors allow you to throw open both doors for a light, airy feel.

Restricted for space with opening doors? Then our patio doors may be an ideal solution. Sliding on an inner track as standard for improved security and longevity, they feature a high security 6 point hook locking system - a far cry from the poor security features on many cheaper doors.

When the ultimate wide opening is desired, our bi-folding doors could be the answer, folding back to create an uninterrupted opening.

Whatever your preference you can be assured that you will get the latest in security and quality.

ULTION Home Defence System

When the Ultion lock, made of anti-snap diamonds

Lock Down Mode
A double attack lock secures the mechanism.

Double
Anti-Snap protection on the inside needs to snap. Ultion double attack lock is not a cheap lock.

2
Attack locks
Locks still work from inside to bear attacks.

11
Pins
Twice as many as normal locks.

8
Drill Defences
8. The drill bit will not penetrate the door ends.

25%
Denser than iron
the mechanism core that houses the anti-snap pins.

Low Maintenance UPVC Doors

The Windows of Distinction door collection is huge. You can choose from a range of stylish residential front and back doors to suit yours and your property's style.

Choose from a large range of moulded panel doors, with an equally large selection of different glass styles to give your entrance real kerb appeal!

For maximum light, how about our half panel range of doors, featuring a large top glazed area? Ideal also for back doors, you can even incorporate pet flaps if required.

Naturally whichever style you choose, you can be sure that security is uppermost, with our multi-point hook locking system and security hinges as standard on all doors.

Wood Look Composite Doors

The entrance to your home is important, so why compromise. Our composite door is a combination of traditional looks and advanced manufacturing techniques.

Although looking like a timber door, our composite doors are manufactured using GRP skins that will stand the test of time, reduce your energy bills and continue to look stunning for many years.

High definition embossing of the skins give a real wood look and the mouldings replicate those of a traditional wood door, but with none of the warping and twisting traditionally associated with timber.

Manufactured as a solid, timber look sash, these doors are 44mm thick, much thicker than a UPVC door panel, so offer higher strength and weight with superb energy efficiency.

“ Our composite doors come in a variety of different styles and colours, from traditional to modern, to give you a style you need. ”

Ultimate Devon Window Collection

For something really special the Devon Window Collection is unique to Windows of Distinction.

Using our Fully Sculpted Woodgrain frame, we mimic timber mouldings found on traditional timber windows for an authentic look.

How about straight joints on mullions and transoms instead of usual UPVC welded ones, or monkey tail handles and even window stays.

“ All of this in a UPVC window! ”

Any colour you want!

Now you are not stuck with standard UPVC colours, you can have any colour window you want. For real flexibility, have a colour outside and white inside.

Ultimate Devon Door Collection

Just like our Ultimate Devon Window collection, the Devon Door collection is unique to Windows of Distinction.

With our woodgrain sculpted frame and straight timber look joints on midrails and mullions, creating a traditional looking entrance door has never been easier.

Versatility

It is not only traditional styles that can be created. Your choice of colour and solid panels can create modern, contemporary styles. The choice of etched glass as shown on the left can create a stunning visual effect to compliment your door.

Below are a range of styles designed to inspire you, but remember everything is made to measure, so feel free to design your own.

Porches & Conservatories

From the smallest porch to large conservatories, our made to measure range can make your wishes come true. Which style or shape best suits your needs?

Sunroom

Probably the simplest design, with a sloping roof. The pitch or slope of the roof can be designed to suit your house if required.

Edwardian and Victorian

The rectangular Edwardian or facet fronted Victorian style gives a stylish alternative to the Sunroom and gives a lighter, airier feeling to the conservatory due to the high roof lines.

'P' Shape

Combining a Sunroom and a Victorian, this style works well with wide conservatories.

Gable Front

Extending the roof ridge all the way to the front of the conservatory creates a triangular front frame for the ultimate light and airy feeling.

Porches & Conservatories

Special Shapes and Sizes

Just like our windows and doors, all of our conservatories are fully bespoke so you are not constrained to standard panel sizes. If you want something out of the ordinary, or indeed need something unusual because of the layout of your property, things that many companies cannot do, then call us, just as Trinity School Teignmouth did when faced with covering the

outside area between two buildings, incorporating steps up to a higher level entrance door. As did Mr G. T. who needed a very large structure to cover his swimming pool but wanted bi-folding doors to open the front up.

But it is not just about the shape and style, think about what it will be used for. Do you want full height glazed frames to maximise inner floor space, or a dwarf wall to create an inside window sill?

Polycarbonate sheet or double glazed units in the roof, maybe with anti-sun self cleaning glass? There are many options available to make your conservatory usable all year round.

Fully Engineered Timber Windows and Doors

Our timber windows and doors are something special. Made from knot free, engineered timber to resist the twisting and warping associated with normal timber, they are spray finished in your choice of colour or stain during manufacture to ensure the paint gets into all internal cavities to massively increase protection and elongate the life expectancy.

With weathersealing and multipoint locks normally associated with UPVC comfort and security is not compromised.

Sustainability

Our products are made from fully certified timber, so you can be sure that the wood harvested has been replaced by new trees.

The Finishing Touches

The Georgian Effect

Our windows and doors offer two different georgian bar options. The first option is the georgian bars inside the sealed unit, giving the georgian effect but maintaining the easy clean features of the flat glass surface.

For the ultimate georgian effect, our surface mounted bars are fitted to the inside and outside of the glass unit. Not only that, but in the double glazed cavity we install the spacer bar that is around the outside of the unit between the inside and outside georgian bars to create the impression of individual glass units.

The Leaded Effect

Most commonly available in diamond or square patterns, lead can also be used in a wide variety of other styles such as 'Queen Anne' or border lead.

A Splash of Colour

Coloured or bevelled glass can offer traditional appearance combined with modern technology. Choose from a wide range of designs, or even your own..
