

Buddies **Challenge** to Foster Carers And others around children in care.

As foster carers we meet challenges on a daily basis and normally survive and learn from them we also share our experience with other carers to help them negotiate those difficult times

(Knowledge shared with another makes it their knowledge)

The Challenge – To learn Computer Coding

Would you like to know more than just how to program your microwave?
(I still only know how to set timer by pressing start x 60seconds for the time required?)

So yes I will be taking on this challenge as well

Before you press delete this e mail let me explain

We will be using a visual programming language called **SCRATCH**
Ask your children and chances are that they use it or have used it in school
(Even primary)

Buddies have started to bring together instructions tutorials and projects, and best of all if you get stuck

We are developing an online community within www.buddies4fc.org.uk web site.

Where we can all share frustrations and achievements.

This is just the beginning we hope to develop at least two coding clubs, to Start
In Stafford and Newcastle

We have the support of the virtual school and Staffordshire Libraries are keen to become involved.

Fancy the challenge or are you able to help develop this fun project?

Please contact us [HERE](#)

Like to hear a little more about coding watch the videos [HERE](#)

Join in our blog [HERE](#)

We depend on technology in our everyday lives
But most of us do not know how to read or write code
“Will I am”
